

Gfeller-Waller Concussion Clearance ■ NCHSAA Return to Play Form

This form is adapted from the Acute Concussion Evaluation (ACE) care plan on the CDC web site (<http://www.cdc.gov/concussion/index.html>) as well as the NCHSAA Concussion Return to Play Form. All medical providers are encouraged to review this site if they have questions regarding the latest information on the evaluation and care of the scholastic athlete following a concussion injury. Medical providers, please initial any recommendations you select.

Athlete's Name _____	Date of Birth _____
School _____	Team/Sport _____

HISTORY OF INJURY

Date of Injury _____

Person Completing Form (circle one): Licensed Athletic Trainer | First Responder | Coach | Parent | Student

Medical Provider Name (please print) _____

NP, PA-C, LAT, Neuropsychologist (please circle one)

Office Address _____

Phone Number _____

Signature _____

Date _____

Name and contact information of supervising/collaborating physician

Gradual Return to Play Plan (Example): Return to play should occur in gradual steps beginning with light aerobic exercise only to increase your heart rate (e.g. stationary cycle); moving to increasing your heart rate with movement (e.g. running); then adding controlled contact if appropriate; and finally return to sports competition. Pay careful attention to your symptoms and your thinking and concentration skills at each stage or activity. After completion of each step without recurrence of symptoms, you can move to the next level of activity the next day. **Move to the next level of activity ONLY if you do not experience any symptoms at the present level.** If your symptoms return, let your health care provider know, and return to the first level once symptom free.

Day 1: Low levels of physical activity (i.e. symptoms do not return during or after the activity). This includes walking, light jogging, light stationary biking, and light weightlifting (low weight – moderate reps, no bench, no squats).

Day 2: Moderate levels of physical activity with body/head movement. This includes moderate jogging, brief running, moderate intensity on the stationary cycle, moderate intensity weightlifting (reduce time and or reduced weight from your typical routine).

Day 3: Heavy non-contact physical activity. This includes sprinting/running, high intensity stationary cycling, completing the regular lifting routine, non-contact sport specific drills (agility – with 3 planes of movement).

Day 4: Non-Contact, sports-specific practice.

Day 5: Full contact in controlled drill(s) or practice.

Day 6: Return to competition.
